

The Wellness Center

DIVISION OF STUDENT AFFAIRS

Dear Student:

Congratulations and welcome to Stockton University!

Prior to class registration and housing assignments, all matriculated full and part-time undergraduate and graduate students must provide immunization information to meet the University and New Jersey state requirements. Compliance with these requirements is mandatory in order to begin the process of attending the University.

Required Immunizations:

- Measles, Mumps, and Rubella: All students must provide vaccination documentation of two doses of measles, one dose of mumps and one dose of rubella vaccine given on or after the student's first birthday. Two MMRs will be accepted.
- Hepatitis B: All incoming students must provide documentation of a completed series of three vaccinations or the two dose adolescent series (must specify Recombivax and been given between ages 11-15) against Hepatitis B.

Residential Students:

NEW JERSEY STATE LAW

This law requires that all undergraduate and graduate students 30 years old and younger, enrolled in a program of study leading to an academic degree, must provide the University with proof of having received two doses of measles vaccine and at least one dose of mumps and rubella vaccine, either separately or as a combined MMR vaccination, and the Hepatitis B vaccination series or laboratory proof of immunity to each of these infections. Students must get this information from their health care provider.

All students enrolled in a program of study leading to an academic degree at a public or private institution of higher education who resides in a campus residential facility, regardless of age, must receive a meningococcal vaccination as a condition of residence at that institution.

All incoming students must be provided with information about Meningitis and the availability and benefits of the meningitis vaccine. All incoming students must complete and return the attached survey.

Meningococcal disease is a potentially fatal bacterial infection commonly referred to as meningitis. Cases of meningitis among teens and young adults 15 to 24 years of age have more than doubled since 1991. The disease strikes about 3,000 Americans each year and claims about 300 lives. Between 100 and 125 meningitis cases occur on college campuses and as many as 15 students will die from the disease. A vaccine is available that protects against four types of the bacteria that cause meningitis in the United States – types A, C, Y and W-135. These types account for nearly two thirds of the meningitis cases among college students. For more information about bacterial meningitis and the meningitis vaccine, contact Health Services at (609) 652-4701 or consult your private health care provider. You can also find information about meningitis and the vaccine at www.acha.org and
